

Plastic People of Substance.

At this year's Design2Part Show in Oaks, Pennsylvania, visitors stopping by the Exothermic Molding booth discovered the outstanding benefits of Reaction Injection Molding. In fact, while they were surprised to learn about the advantages of the RIM process, many were amazed at how knowledgeable our staff is regarding plastic processes of all sorts.

Not only is RIM becoming the preferred alternative to a wide range of methods, but more and more designers and engineers are turning to our plastic savvy for invaluable design consultation and first-rate production.

So, if you're going to be in Chicago, May 10th & 11th, we invite you to stop by the D2P Greater Chicago Show in Schaumburg to learn more about Reaction Injection Molding and meet our well-informed staff.

It will be a pleasure to shake your hand.
